

USER TIPS

Sewer systems will handle all typical household waste.

However, you should not allow unsuitable items to enter the drains, **including but not limited to:**

GLASS	METAL
RAGS	PLASTIC
CLOTH	CONDOMS
SEAFOOD SHELLS	OIL
EGG SHELLS	GREASE
SANITARY NAPKINS	PAINT
TAMPONS	SAND
DIAPERS	SOCKS
BABY WIPES	LIQUED FABRIC SOFTENER
GO-JO HAND SOAP	POWDERED SOAPS & DETERGENTS
CAT LITTER	STRONG CHEMICALS
FLAMMABLE MATERIAL	
GASOLINE	

ADDITIONAL RECOMMENDATIONS FOR CUSTOMERS WITH GRINDER PUMPS:

The E/One grinder pumps BCSS installs at homes and businesses require very low preventative maintenance, and there are precautions listed below that can help uphold the pump.

- BCSS recommends that customers open their grinder pump lid and hose the pump out every few years. It's a quick and easy task that can be added to your Spring cleaning or landscaping to-do list.
- Pour ¼ cup Dawn down the drain once per month to break up any possible build up in the pump.
- Before you leave town for longer than 2 weeks, we suggest you fill up your bathtub and drain it to flush the pump. Follow the same procedure after using drain cleaners.
- Ants can ruin the electrical wires connected to the pump's outside alarm box. If you have ant problems or predict issues at your home, place an ant killer trap in your alarm box.
- When a grinder pump's lid is not high enough above ground, rainwater can collect on and around the lid, causing the pump to flood and run too frequently. Therefore, when building and landscaping around a grinder pump, ensure dirt and sod is not applied above the recommended level, marked on the pump.

I have read these suggestions and understand that this is not all inclusive, and BCSS cannot be held accountable for any damage to the system. Please use your best judgment in maintaining your system.
